

DUVALE PLC CASE STUDY

NTL - Hook, Hampshire

BRIEF

Divisions were selected by NTL to supply and install 12 no sets of high acoustic operable walls within their new Headquarters Building, as not only were we the most competitive, but we were able to guarantee and achieve completion within five weeks of instruction.

The project was completed in two phases. Within two weeks all 12 no sets of tracks and acoustic baffles had been installed allowing the suspended ceiling contractor to complete its work on time. Being treated as furniture, the panels followed after the carpets and within programme, with all 12 no sets being installed within three days simply connecting to the pre-installed tracks.

NTL specified our 53dB grey laminate type 110 Operable Wall.

SPECIFICATION

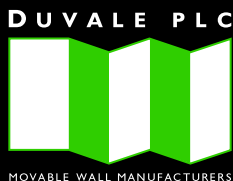

- Duvale Type 110C
- Series 5500
- Single Point Suspension, Grey MFC Finish.

TESTIMONIAL

“With NTL growing constantly it was essential we found more space for our staff. Moving offices was not an option, so a Duvale Folding Wall was the perfect alternative. We can now divide our large meeting room in two to create offices or smaller meeting rooms. This has definitely improved productivity.”
